

## Special Forum Sessions on Real Estate

October 30th from 10.00 to 13.30

### Invitation & Programme

[www.renovalue.eu](http://www.renovalue.eu) | [@RenoValueEU](https://twitter.com/RenoValueEU)

In collaboration with:

United Nations Global Compact

Cofunded by the Intelligent Energy  
Europe Programme  
of the European Union

## The presentations held during the two interlinked special forum sessions will address the following issues:

1. Strategies and options for real estate investors, managers and users to successfully manage and demonstrate their responsibility with regard to the environment and society.
2. Strategies and options for improving and highlighting the positive role of the construction and real estate industry within the sustainable development of the built environment.
3. Methodologies to understand and demonstrate the whole value of a built asset including the links between sustainability related performance aspects of buildings and financial corporate goals.
4. Tools and concepts addressing the organisation of information flows and decision-making processes, including supply chain challenges.
5. Policy recommendations for creating supportive framework conditions.
6. Guidance and capacity-building programmes for built environment professionals.

### Sustainability from a valuation practitioner's perspective

Mark Creamer MRICS, Head of EMEA Valuation & Advisory Services CBRE

### Panel discussion and Q&A from the audience

### Wrap up and conclusions by the moderator

RenoValue

The Special Forum Sessions on Real Estate are organized in the framework of the **RenoValue project**.

**RenoValue** is a 2-year project funded by the Intelligent Energy Europe Programme of the European Union.

The **RenoValue** consortium includes: the Royal Institution of Chartered Surveyors, the Karlsruhe Institute of Technology, CBRE, the Polish National Energy Conservation Agency, Troostwijk Real Estate, Skanska and Business Solutions Europa.

# Why RenoValue is important

The use of property valuation is an essential aspect of the property lifecycle. Incorporating energy efficiency and renewable energy considerations into valuation practice is essential to raise awareness on the value of investing in energy efficiency (EE) and renewable energy (RE) installations amongst prospective buyers, sellers, lenders and investors. Being able to demonstrate the business case to these built environment stakeholders is a necessary prerequisite to accelerating the market transition towards sustainable buildings in Europe.

In this context, **RenoValue** aims to develop and pilot tailored training material for practising valuation professionals from across the EU. The training material will provide professionals with a more profound knowledge base regarding the latest energy efficiency and renewable energy technological solutions, their respective impact on various economic building performance aspects, relevant information sources, as well as methodological and theoretical guidance so that valuation professionals can appropriately factor energy efficiency and renewable energy issues into the valuation process and advise their clients accordingly.
